

Free Artificial Intelligence workshops prepare teachers and students for the 'Age of AI'

The Science Foundation Ireland ADAPT Research Centre for AI-Driven Digital Content Technology offers free modular workshop programmes to help primary and secondary school students navigate the Age of AI successfully and safely.

Empowering Students to become Scientific Citizens

The *Technology in My Life* and *AI in My Life* programmes help empower students as scientific citizens who can understand, evaluate and have a voice on the role of emerging STEM innovations in our lives.

The workshops form part of the ADAPT #DiscussAI initiative, a major campaign of public events that has engaged 60,000 members of the Irish public in learning, conversations and reflection on how AI impacts our lives.

Cross-Curriculum Themes

The teacher-led workshops emphasise the privacy and ethical implications of AI, therefore cutting across the primary and secondary school curricula. Students are encouraged to think critically and creatively, and to communicate their views with confidence.

Do I Need to Know Anything about AI?

No! Teachers don't need any prior knowledge of AI in order to deliver these programmes. ADAPT's skilled Education and Public Engagement team will provide training for teachers, and the course toolkits will provide teachers with background information on each of the modules.

Our AI Ambassadors can visit your school if you'd like in-person support.

Bringing Conversations on AI to the Classroom

The programmes' flexible modular structure means you can select workshops to suit the class time you have available.

How Do I Learn More?

If you would like to know more about these programmes, email education@adaptcentre.ie or visit www.adaptcentre.ie/explore

Engaging Content
Engaging People

For Primary Schools: Technology in My Life

This workshop series encourages 5th and 6th Class students to reflect on the technology they use every day in school and at home and consider how to use such technology in an ethical manner.

The programme will explore:

- The technologies that primary school students should be allowed to access
- The use of technology (such as voice assistants) for help with homework and connecting with others
- Identifying and dealing with forms of unethical and undesirable behaviour facilitated by technology

For Transition Year Students: AI in My Life

AI in My Life emboldens students to reflect on their experiences in a world shaped increasingly by AI.

This workshop series enables students to:

- Learn about AI and how it works
- Uncover some of the ethical and privacy implications of AI
- Explore AI careers and related further study options
